Total	1792	

Organizational Structure

The WKHS/Claiborne Rural Family Medicine residency program is structured as a three-year training experience that follows a 13, 4-week block schedule. Residents in PGY-1 receive rotation experiences focused on developing fundamental clinical skills through primary assignments in rural family medicine, pertinent subspecialty rotations, and the FMP. The PGY-2 allows residents to develop a more robust fund of knowledge and clinical skill set through continued exposure in primary assignments with additional experiences in the FMP, rural family medicine, medical subspecialties, and individualized curriculum rotations. The final year of training is focused on preparing the PGY3 for independent practice through leadership roles on the services, additional subspecialty rotations, and extensive experience in individualized curriculum rotations and the FMP. For all rotations at WK facilities, apartment housing is provided.

Vacation: All residents are provided four-weeks paid vacation each academic year, and 10 sick days.

Research: Residents will have a longitudinal research experience throughout 3 years, culminating in the completion of at least 2 scholarly activities (one of which will be a QI project). Residents will be encouraged to present their scholarly activity at the annual WK Research Symposium and at local/national conferences

Rural Family Medicine-Blended clinical rotation that consists of the following:

- Inpatient Hospital Rounds an average of 48 hours a month. There are also after-hour and weekend rounds that average 30 hours a month (78 hours per month total).
- FMP hours average 64 hours a month during PGY-1 and PGY-2, and 80 during PGY-3.
- Nursing Home visits an average of 6 hours a month (longitudinal experience commencing in PGY-1)
- Home visits with variable average hours per month.

Individualized Curriculum

Residents select rotations based on their individual learning plans and future career goals. Rotation options include but are not limited to Administrative/Research, Addiction Medicine, Allergy/Immunology, Anesthesiology, Endocrinology, Geriatrics, Hematology/Oncology, Infectious Diseases, Lifestyle Medicine, Nephrology, OB/GYN, Palliative Care, Podiatry, Pulmonology, Radiology, Rheumatology, Sleep Medicine, Urgent Care, Urology. Any required rotation can also be taken as an elective, and other rotation opportunities may be available upon request.

Surgical Subspecialty Structure

Includes rotations in Urology, ENT, and Ophthalmology
